# Principles of Enterprise Networking

By: Yves Rene Shema

# What is a network?

# Network

- Collection of **nodes** connected by some type of transmission media or **link** , for the purpose of sharing services, devices or data (i.e. networked **resources** )

# Node

- Any device that can communicate over the network and is identified by a unique identifying number, known as its network address .

# Link

# Resource Control

# Client-server Networks

# Peer-to-peer Networks

# Protocols

- Mutually agreed upon rules for communication
- Define the format, order of messages sent and received among network entities, and actions taken upon transmission, receipt, and timeout
- Govern all communication activity on the internet

# Example Protocols

# Layered networking model

# Encapsulation

# Protocol Data Units (PDU)
